

discover the possibilities

Here's what
Everest Mouldings and Specialties
can do for you...

Ideas into Action

Let your imagination free. Become the architect of your idea and your dream house can become a reality. One of the key advantages of our unique manufacturing process is that it allows for unlimited customization. We can manufacture any custom shape or size as desired by our clients just as easy and rapidly as our standard profiles. We also have hundreds of additional profiles at our fingertips. The possibilities are endless.

Transform your Look

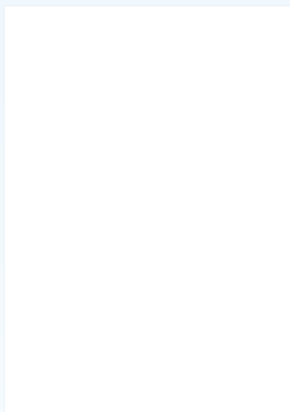

Take your ideas to the next level and develop a stunning look that will impress all critics. Experience these changes to move the overall impression to the next level. Make a unique, unspoken statement every time your friends, relatives and neighbours come over to visit

Increase the Value

There is no doubt that every home has its own face and character. Think outside your everyday needs and bring value to your home. Our products will elevate its beauty and increase your home's value at the same time.

Visit our Showroom

Feel free to drop by our showroom to see all of our standard profiles and many possible finishing options. Our sales staff would be more than happy to assist you with any questions.

EVEREST
MOULDINGS & SPECIALTIES

PROCESS

TRIM

Our Quality Process Equals Results

Everest has exclusive custom equipment designed specifically for our process, improving production quality and efficiency.

Everest offers pre-coated shapes started with an expanded polystyrene core, followed by an extrusion process that utilizes a well known cement-based coating and a fiberglass reinforcing mesh.

This process provides strength and flexibility, making it the ideal choice for your next construction or renovation project. As a result, consistent, high quality architectural shapes are available at a very cost-effective price.

We offer an unlimited array of architectural shapes, including trims, sills, bands, cornices, columns, quoins, and much more. Please visit us online at www.everestmouldings.com to see our full line with an even greater variety of shapes and sizes than we present here.

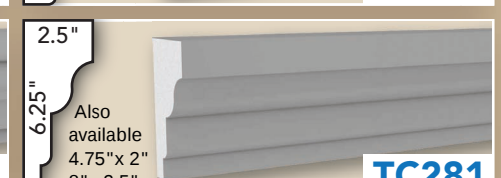

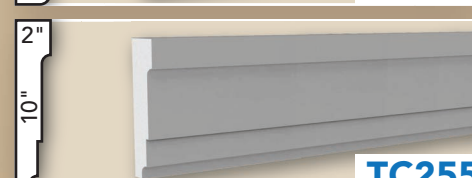

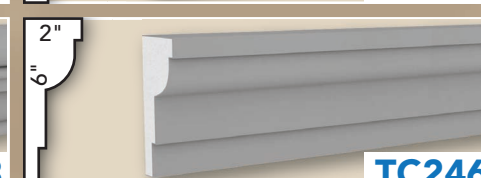

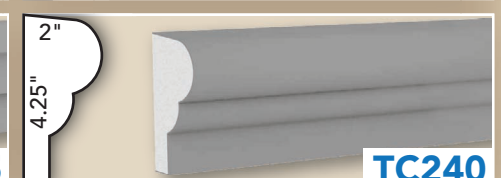

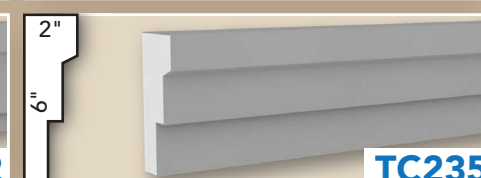

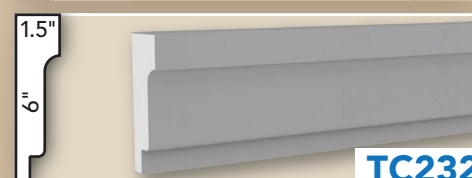

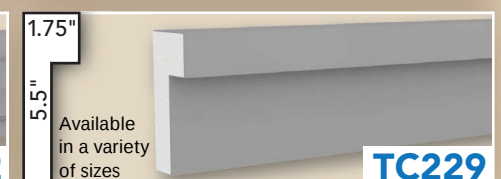

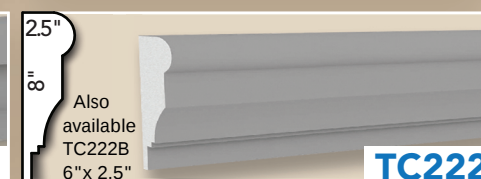

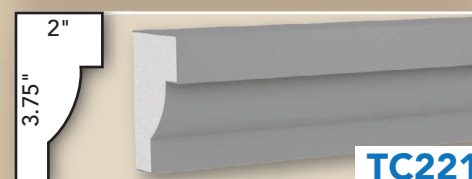

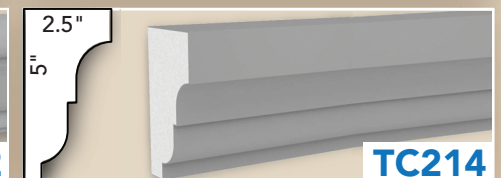

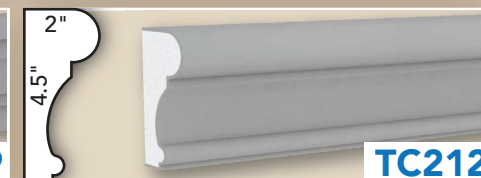

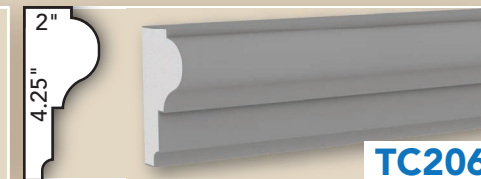

Everest's mouldings can be installed on brick, stone, wood and other surfaces, substituting costly pre-cast.

Our unique process provides durable, seamless, flexible, waterproof membrane that resists weather and temperature changes, lateral movement, shear, and allows for normal expansion and contraction.

As a result, our customers receive the benefits of a maintenance free, beautiful product that has an easy installation process, saving time and money on every project.

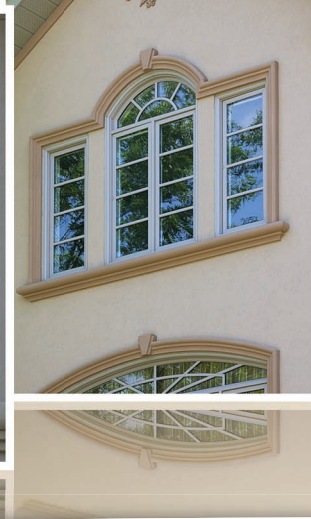

At their simplest, mouldings are a means of applying light and dark shaded stripes to a structure without having to change the material or apply pigment. Trim mouldings attached around window or door openings give a unique sense of elegance to your home.

SILLS

CORNICES

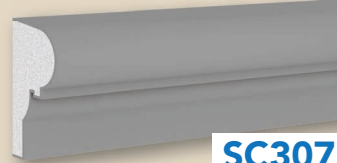

As the foundation of a window, sills have been used in architecture since ancient times for both function and aesthetics. All of our window sills incorporate a drip edge along the outside bottom edge to reduce the appearance of water streaks down walls.

The term cornice comes from Italian *cornice*, meaning "ledge." Cornice molding is generally any horizontal decorative molding which crowns any building element: the cornice over a door or window, for instance, or the cornice around the edge of a pedestal.

BANDS

COLUMNS

Decorative bands are generally applied between each floor in a structure and give a sense of height and grandeur to your home. Our mouldings have a small fraction of the weight of pre-cast concrete forms, making installation far easier and more cost effective.
